The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim1-7 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. These claims are vague and indefinite because they are set out to be method claims and yet no clear steps are defined by these claims. That is to say the claims read as a narrative describing various structures but with no specific steps.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Claim 1-4, 7,8 and 20-22 are rejected under 35 U.S.C. 102b as being anticipated by Takagi. Takagi see figure 1, teaches a drive circuit for a piezoelectric actuator having an oscillator that oscillators due to the supply of a drive signal with specific frequency to a piezoelectric element in a contact section is provided to the oscillator and comes into contact with the driven object to comprising frequency control means for controlling the frequency of the drive signal #2 amplitude detection means to detect and the amplitude of the detection signal #11 the amplitude a standard amplitude value are compared #10. Regarding the so-called method claims, Takagi shows the method of controlling the increase or decrease in frequency of the drive signal but does not show a

Art Unit: 2834

step of controlling the rate of change of increase or decrease in the frequency control signal. However the claim language calls for only one or the other, and thus Takagi anticipates these claims.

Claims1-8, 11, 12 and 20-22 are rejected under 35 USC 102b as anticipated by Shibatani. Shibatani (figures 9, 12 and 14; column 9 lines 20-37) teaches a driving device for a piezoelectric motor which controls the frequency of the drive signal in accordance with detecting both a phase difference and an amplitude, comparing these values in a microprocessor and adjusting the drive frequency in accordance with the deviation from the desired reference values. Note that the microprocessor inherently contains appropriate software that instructs at what to do in such software is stereotypically stored on a storage medium.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim19 rejected under 35 U.S.C. 103(a) as being unpatentable over Shibatani or Takagi. This claim and it's that the basic piezoelectric device is used in the environment of a

Art Unit: 2834

timepiece. The use of piezoelectric motors in timepieces is known per se (official notice taken). Because of the increased stability and reliability provided by controlling a piezoelectric motor with various feedbacks as demonstrated by Takagi or Shibatani, it would have been obvious to one of ordinary skill in the art to substitute these specific praise electric motors where ever other such motors have been deployed in the prior art.

Claims 9,10 and 13-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Budd whose telephone number is 571-272-2019. The examiner can normally be reached on Monday through Thursday from 6 a.m. to 4 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg, can be reached on 571-272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
